## OPERATIONS

### TAILINGS RETREATMENT PROJECT

Throughout the September 2023 quarter the Company continued to process the historic dump leach stockpile pending the completion of the Wiltails processing unit and refurbishment of the crushing circuit. During the quarter 402,946T of dump leach material was processed, producing 4,946oz of Au.

Work to complete the Wiltails processing unit occurred during the quarter with first ore processed on 1 October 2023. The Wiltails processing unit enables a dual feed of both tails through the processing plant and dump leach ore stockpile through the crushing circuit. The dual feed processing has now increased throughput to 280DT (dry tonnes) per hour from the previous rate of approximately 180DT per hour.

Work has commenced on an expansion of the CIL circuit which is intended to enable a further increase in throughput whilst maintaining recoveries.

During the December 2023 quarter the main activities targeted are complete commissioning of the Wiltails circuit with a focus on increasing throughput whilst maintaining recoveries, studies and work in relation to an expansion of the CIL processing facilities and pre-feasibility work regarding recommencement of mining.
